Limited Warranty ECONO-SLAB™ SYSTEM

Every ECONO-SLAB™ system includes a specific client/site set of engineered drawings.

The plans have specific directions for the preparation of your site, the installation of insulation, and the specific configuration of the bar pattern for both the edge beams (End wall / Sidewall details), and the slab grid.

Provided you follow the directions for the setup and then use the concrete shown on the drawings (min 32Mpa) with the added fibre mesh in the mix, the ECONO-SLAB™ will carry a two (2) year warranty against failure.

Microcracks, while rare, are possible due to variables in drying conditions that can not be predicted and will not constitute any failure as they will in no way affect the structural integrity of the slab.

A downloadable installation guide is available at econo-slab.com
